技术规格

Background:	This protein is highly similar to FLASH, a mouse apopt otic protein identified by its interaction with the death-effector domain (DED) of caspase 8. Studies of FLASH protein suggested that this protein may be a compone nt of the death-inducing signaling complex that include s Fas receptor, Fas-binding adapter FADD, and caspase 8, and plays a regulatory role in Fas-mediated apoptosi s. Alternative splicing results in multiple transcript varia nts encoding the same protein.
