技术规格

Background:	This gene encodes a member of the copine family. Members of this family are calcium-dependent, phospholipid-binding proteins with C2 domains, two calcium- and phospholipid-binding domains. Through their domain structure and lipid binding capabilities, these proteins may play a role in membrane trafficking. This protein is thought to be brain-specific and has a domain structure of two N-terminal C2 domains and one von Willebrand factor A domain. It may have a role in synaptic plasticity.
Applications:	ELISA, IHC
Name of antibody:	CPNE6
Immunogen:	Fusion protein of human CPNE6

Full name:	copine 6
SwissProt:	O95741
ELISA Recommended dilution:	5000-10000
